Publ i cati on 2011

PRIMA MARINA is ESCOFET's first bench-table collection in LIQUID STONE, the trade name we have given to UHPC (Ultra High Performance Concrete), ushers in a new generation of much lighter, high-resistance street furniture.

The PRIMA - MARINA collection comes in various shapes and sizes of benches, complemented with tables. They all come with "Deck" teakwood cladding on the top surface to guarantee stability and optimum conservation under outdoor weather conditions.

The neutral, abstract design of this series, developed by the Escofet's team of technicians, lends itself to installations in any situation, either individually in lines, or in flexible clusters of tables and benches.

UHPC technology facilitates the design of extremely durable lightweight items with a minimized section due to its high resistance to compression, bending, impact and wear.

Minimum water absorption improves this material's resistance to cracks and weathering caused by frost in harsh climates.

The quality and the acid-etched surface finish of LIQUID STONE products is similar to sandstone, available in beige, white and dark grey.

Ease of transportation, low energy consumption during manufacturing and 100% recyclable components yield optimum results in Life Cycle Analyses of LIQUID STONE products.

(1) UHPC concrete (Slimconcrete®), Grey / Beige / Black, Acid-etched and waterproofed. (2) Teca wood Deck type. / Anchored with screws / 537 kg
