## Summary

RIO LOUNGER was originally designed for installation on the sand at Copacabana beach.   
Manufactured in Liquid Stone (UHPC) for use as a permanent feature, it is available in white, grey, beige or black, and a waterproof finish. Rio is the visualization of a landscape embodied in an object. But it is essentially an experience. The euphoria of nature brought to the surface in dynamic forms that move sensually, stopping to admire the arched back of Pan de Azúcar hill from Copacabana beach. This Lounger reconciles exuberance and precision, rhythm with quietness.
